

# Sigma Orogenic Gold Veins: Spatial Clustering, Not Stress-Shadow Repulsion

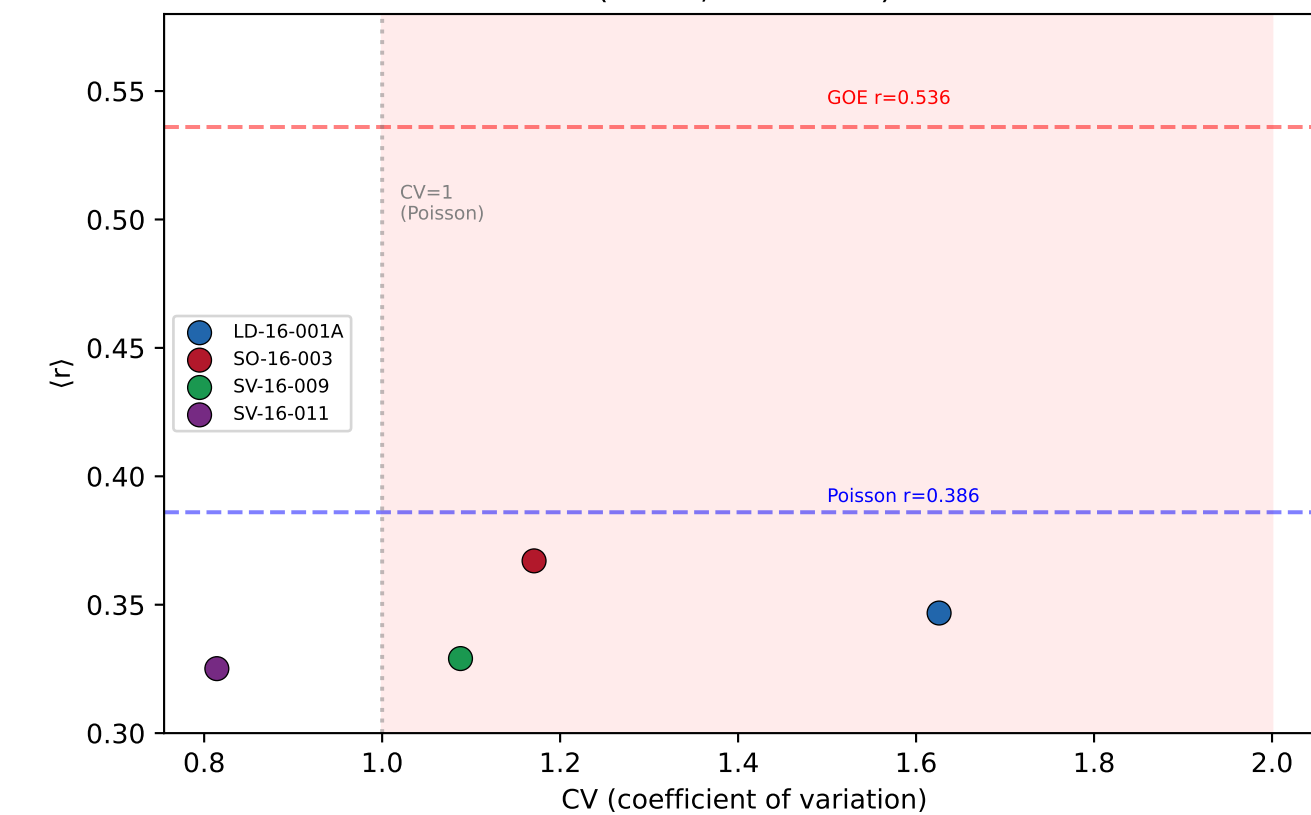

(a) Vein positions along drill holes  
(visible clustering)

(b) Spacing distribution  
(short-spacing excess = clustering)

(c) All holes: clustered regime  
( $CV > 1$ ,  $r < \text{Poisson}$ )

(d) Declustering FABRICATES GOE  
(random points also  $\rightarrow$ GOE)
